

*Reaching new heights in simulated flight.*

# REAL FLIGHT

R/C FLIGHT SIMULATOR

# G4™

The Seawind name is used with permission of Seawind Inc.

The world is constantly changing, and RealFlight continues to change with it. Introducing G4, the flight simulator with even more features, more realism — more going for it than any other sim out there. Intrigued by the thought of flying onto and off of water? G4 lets you experience it. There are plenty of other advancements that also have to be seen to be believed. For 10 years it has been far and away the most realistic flight simulator...and G4 is kicking off our second decade by taking virtual R/C to the next level!

- *Over 60 aircraft to fly!*
- *Over 25 flying sites to explore!*

A wide variety of great R/C aircraft designs, flying over both PhotoField™ and 3D sites.

### ***Exciting water interaction***

Land on or take off from a pond, lake or ocean — flying one of several aircraft equipped with floats.

### ***Dynamic Slope Soaring***

Recreate the conditions that competition-level sailplane pilots would encounter.

# INTERLINK™ ELITE CONTROLLER

by Futaba®

QuickSelect™

Now controls all basic software functions — virtually eliminates the need for mouse and keyboard!

### Digital Trims

Every aircraft in G4 has their digital trims, already preset and permanently stored in the simulator.

A convenience feature that lets you make changes to aircraft, flying sites and more, right from the controller. No need for mouse and keyboard!

Use as a controller, an interface or as both at once!

**RealFlight: it's more of what you want in a flight simulator...much more!**

### Night flying

Convert any 3D site to dusk, for a totally different flying perspective.

### Takeoff and Landing Trainer

The easy, fun and risk-free way to learn how to take off, land and taxi before trying it with your real R/C model.

### The list of RealFlight advantages is virtually endless!

- RealPhysics™ — the most accurate flight model imaginable, ensuring that all aircraft and 3D objects reflect real-lift physical laws and limitations
- AccuModel™ aircraft editor — for customizing every aspect of your aircraft
- Over 5000 square miles of TruLife™ terrain
- FlexiField™ flying site editor — for adding buildings, trees, vehicles, etc.
- Split-screen flying with a friend
- Virtual Flight Instructor — tips from expert pilots such as John Glezellis, accompanied by recordings that show the proper stick movements for executing aerobatics
- TruFlo Wind Dynamics™ — a five-component model that lets you determine wind velocity and direction
- Compatible with all RealFlight Expansion Packs

### Streamers

Add visual appeal to freestyle maneuvers; you determine the number of streamers, as well as their length, color and position.

### Responsive objects

On both land- and water-based flying sites, results to impacts (such as trees and buoys) will be very realistic and detailed.
